PM SHIPPING

„EFFICIENT LOGISTIC SOLUTIONS – MADE IN GERMANY“

HIGH LEVELS OF SAFETY BY PROACTIVE PLANNING

We work closely together with leading workboat manufacturers and dealers, and understand the requirements of the industry. Our uppermost objective is customer satisfaction and the rendering of a high quality/valuable service within the scope of your budget specifications.

Whether ferries, patrol boats, supply vessels, rescue boats, pilot boats, coastal ships, landing crafts or trawlers: Great attention is paid to technical details regarding the transportation of commercial vessels. Despite their profound experience, our loadmasters do not merely estimate the number of belts or the strength of the chains required,

but instead always rely on the exact calculations of the lashing forces, and thereby comply with the load safety regulations. Every shipment is carefully prepared and coordinated, and practical assistance is given on-site. In this way, we achieve a high level of safety and prevent the generation of transportation risks.

The services by PM Shipping are certified in accordance with the DIN EN ISO 9008:2008 standard. This means that our employees professionally plan and execute your order according to the highest quality standards, as well as with great efficiency.

EFFICIENT NETWORKS COMBINE SPEED WITH RELIABILITY

Many orders in this field are technical emergencies, in which every second counts. In the course of our activities, we have developed practice-tested emergency plans with defined procedures which allow the situation to be analysed without losing valuable time, and allow us to react with a suitable solution.

Besides time, the accessibility of the destination is a further challenge. Often offshore systems, ships in international waters or vessels in crisis regions throughout the world are concerned. PM Shipping has a wide network of specialist companies divided into regions and with

differing task focuses which can be specifically deployed depending on the order. In this way, we combine speed with reliability, and therefore provide a service portfolio which is operational anywhere and at any time:

- Jet and helicopter chartering
- On-board courier
- Customs clearance, secondary packaging and other document processing
- Spare part consolidation and storage
